dovecot has its own dovecot SASL. this is what my postfix SMTP uses to authenticate sender. but I don't think dovecot uses the SASL by itself.

on egw 1.6 there 2 configuration settings regarding email authentication:

1. Standard mailserver settings (used for Mail authentication too)
2. Authentication / Accounts

no.1 is where i put my IMAP and SMTP details

no.2 I just set 'mail' as authentication type

are these two configurable in expresso/egw1.0? if yes, this is what I need to know.

Thanks
