AS I SAID it's POSSIBLE.

After intalled Expresso execute this queries (change localhost to you imap server):

```
INSERT INTO phpgw_config values('phpgwapi', 'mail_port', '143');
```

```
INSERT INTO phpgw_config values('phpgwapi', 'mail_server', 'localhost');
```

An than change the authentication to MAIL in expresso/setup

And that's it

So, the Calendar will work whith bugs, ContactCenter and ExpressoAdmin won't work, because ExpressoLivre neglected the community
